1st TD Report : Wargame

Intelligence Artificielle

Student : Omar HACHANI
Student ID: 22301138
Report's deadline : October 25th 2026

1. Choices

Before any AI optimizations or strategy making, I have decided that I should start by making this program functional, because I have not practiced C in ages. That's why I spent the first weeks analyzing and trying to understand it (That was when I saw with my colleague Dania Chabane that an attacking pawn's value did not count in an attack).
In the last week, I started coding and pushing my code in its repo on Github, where I implemented rudimentary functions and strategies only to make this work together.

2. Algorithm performances

3. Alpha-beta cuts
